

Embedded Objects: Video

HTML Videos

```
<video controls src="movie.ogv">
  <p>Your user agent does not support the HTML5 Video element.</p>
</video>
```

Embedded videos

The embedded videos are specified by **<video>**.

There are two way of specifying the embedded content.

The src attribute

The image given by the src attribute is the embedded content.

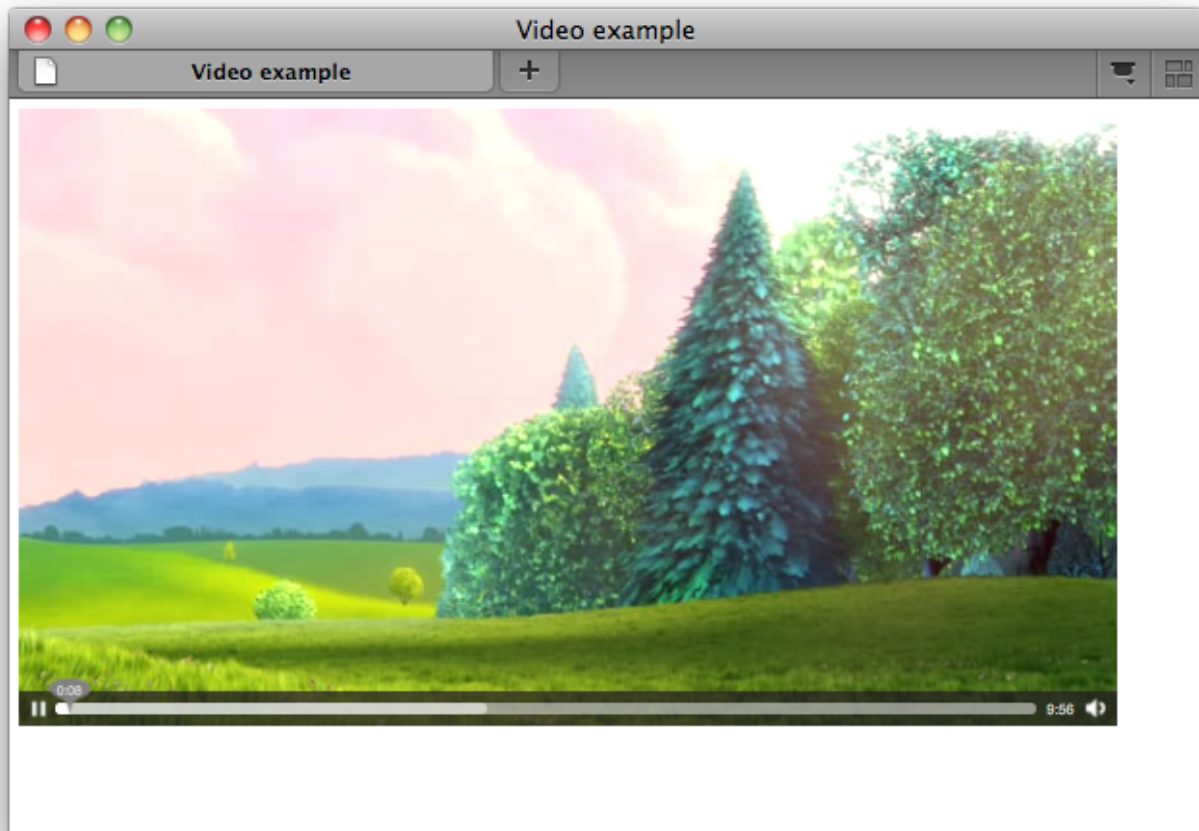

SRC stands for **source**.

```
<video src="movie.ogv">
</video>
```

The source element

The **<source>** element allows authors to specify multiple alternative media resources for media elements.

```
<video>
  <source src="movie.mp4" type='video/mp4; codecs="avc1, mp4a"'>
  <source src="movie.ogv" type='video/ogg; codecs="theora, vorbis"'>
</video>
```

Fallback contents

The fallback contents are contained between `<video> ... </video>`.

```
<video src="movie.ogv">
  <p>Your user agent does not support the HTML5 Video element.</p>
</video>
```

Video codecs

The HTML5 specification does not require a video codec to be supported by all user agents.

See the wikipedia [browser support table](http://en.wikipedia.org/wiki/Open_video#Table) [.\(http://en.wikipedia.org/wiki/Open_video#Table\)](http://en.wikipedia.org/wiki/Open_video#Table).
